BASIC DOORS FIRE DOORS

- ◆ All Types of Fire Doors
- ◆ Single & Double Leaf
- ◆ Cabinets ◆ Fire Duct / Shaft Doors
- ◆ Wood Grain Finish Fire Doors

Doors that Welcome... Doors that Protect

Fire hazards are increasing everyday. Considering the increased threat of these hazards the Chief Fire Officers (CFOs) as well as Tariff Advisory Committees (TACs) of all major metros have issued stringent guidelines for the use of Fire Doors for upcoming high-rise buildings before handing over the Occupancy Certificates.

Basic Fire Doors are Approved & Tested as per BS:476-Pt.20-22 & IS:3614 for all three tests with respect to Stability, Integrity and Thermal Insulation by Central Building Research Institute (CBRI) at Roorkee and ARAI, Pune, India.

These doors are available in Single Leaf and Double Leaf configurations, with a wide range of colours and finishes and an option of rectangular or circular vision panel. As such one has a wide range of doors to choose from as per one's specific designing requirement. Basic Fire Doors are a combination of strength and durability with highly attractive architectural appearance which is a rare feature found in steel doors.
